

Chapter (1)

Introduction

1.1 Introduction of the project

In today's fast-paced world, online shopping has become a part of our daily lives. It's the process of buying products and services over the internet, without the need to visit physical stores. The convenience of online shopping has transformed the way we shop. With a few clicks, we can explore a world of products and have them delivered right to our doorstep.

“Amono Online Shop” is to make your online shopping experience even more convenient. There are four parts of the “Amono Online Shop”: the administrator, business owner, registered user and guest user. For the administrator of the system, admin can view all business owners and registered users, view account details and manage status such as (account active, account suspended). Admin can view business details of each business owner and view all products related to that business. Admin can also manage status such a (approving product, rejecting product) of the products. Admin can create, retrieve, update, delete categories and also view all filter products that is related to each category. Admin can view all products, check business details who posted, view details of each product and manage status such as (approving product, rejecting product) of all products. Admin can view all contact lists that is feedback by each business owner and registered user, mark and unmark each contact list to know that is already read or not.

For business owners, we offer a platform to expand your reach, simple setup, marketing support, and a chance to connect with your local customers. If the user wants to be business owner, the user must be registered as a business man. So, the user can sign up by two register forms. In first registration form, the user must enter the full name, email, password and gender. And in second registration form, the user must enter the business name, business description and upload business logo. And then this user will become the business owner. For business owner, he or she can view and edit related business detail such as (change business name and description, logo update). The business owner can add new products, view all products that is own by authenticate business owner, edit or update products and delete or remove own products. The business owner can also view other business owner detail and products that is owned by another business owners. The business owner can contact to admin team.

For guest user side, the user can view all products related to each category and each business that is approved by admin, details of each product. If the user wants to buy the products or wants to contact to admin, the user must be registered user. So, the user can sign up by entering

the full name, email, password and gender and then this user will become the registered user. For registered user, user can view all products related to each category and each business that is approved by admin, details of each product. Users can add products to their shopping carts and order the products. In the ordering process, users can view the status of ordering product from the shopping cart. By registering and opening an account, you can easily change your name, upload a profile, and update your password, whether you're an admin, a business owner, or a registered user.

“Amono Online Shop” is a complete e-commerce web application. It uses Java for the back-end, including JSP and servlets, and for the front-end, it relies on HTML, CSS, Bootstrap, JavaScript, and jQuery. The database is managed with MariaDB. This combination of technologies provides a strong and secure platform for online shopping.

1.2 Objectives of the project

The main objectives of the projects are:

- To provide customers with a convenient one-stop shop for their favorite products
- To enable customers to compare and purchase their preferred products
- To save the user valuable time
- To enhance the sales of each business
- To support local business organizations
- To receive feedback loop and improve our platform

Chapter (2)

Theory Background

2.1 What is J2EE?

J2EE means Java 2 Enterprise Edition. J2EE is a specification for a collection of software components to enable development of multi-tiered web-based application. These software components include Servlets, Java Server Pages (JSPs), and Enterprise Java Beans (EJBs).

Servlet is a web component that is deployed on the server to create a dynamic web page. Servlet is an API that provides many interfaces and classes including documentation. Servlet is a class that extends the capabilities of the servers and responds to the incoming requests. It can respond to any requests.

Java Server Pages (JSPs) technology is used to create web application just like Servlet technology. It can be thought of as an extension to Servlet because it provides more functionality than servlet such as expression language, JSTL, etc. The JSP pages are easier to maintain than Servlet because we can separate designing and development.

Enterprise Java Beans (EJB) is one of the several Java APIs for standard manufacture of enterprise software. EJB is a server-side software element that summarizes business logic of an application. Enterprise Java Beans web repository yields a runtime domain for web related software elements including computer reliability, Java Servlet Lifecycle (JSL) management, transaction procedure and other web services.

2.2 J2EE Architecture

J2EE architecture supports component-based development of multi-tier enterprise applications. A J2EE application system typically includes the following tiers:

- In the client tier, Web components, such as Servlets and Java Server Pages (JSPs), or standalone Java applications provide a dynamic interface to the middle tier.
- In the server tier, or middle tier, enterprise beans and Web Services encapsulate reusable, distributable business logic for the application. These server-tier components are contained on a J2EE Application Server, which provides the platform for these components to perform actions and store data.
- In the enterprise data tier, the enterprise's data is stored and persisted, typically in a relational database.

J2EE architecture is a Distributed Computing Architecture. Figure (2.1) shows the architecture of J2EE.

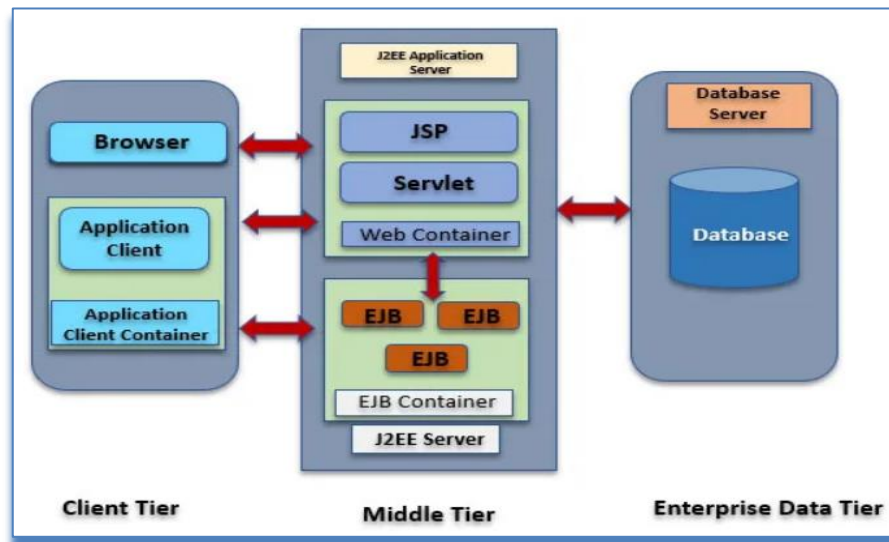

Figure (2.1) Architecture of J2EE

2.3 J2EE Containers

There are four types of containers. These are EJB Container, Web Container, Application Client Container and Applet Container.

- **Application Client Container** manages the execution of all application client components for one J2EE Application.
- **Web Container** manages the execution of all JSP pages and Servlet component for one J2EE Application.
- **EJB Container** manages the execution of all enterprise beans for one J2EE Application.
- **Applet Container** is a combination of the Web browser and Java Plug-in running together on the client machine.

Figure (2.2) shows the J2EE container types.

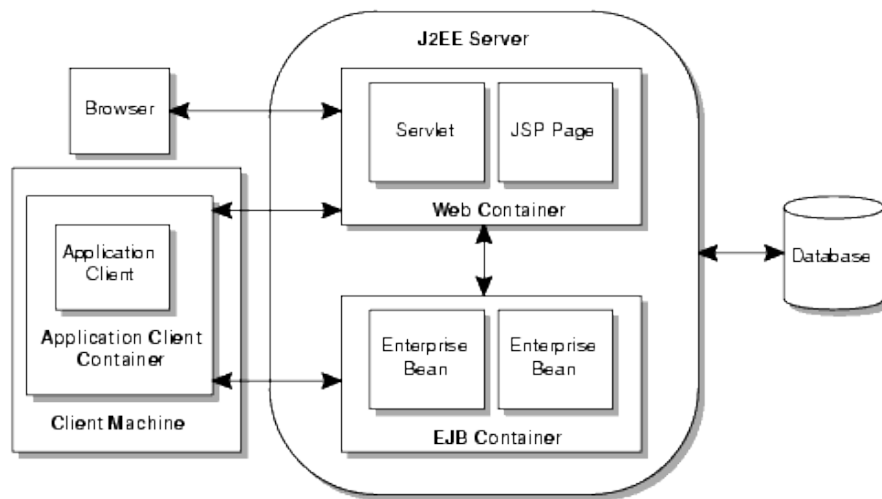

Figure (2.2): J2EE Container Types

Chapter (3)

System Requirements Specification and Database Design

3.1 Hardware Requirements

The minimum hardware requirements for this system are as follows:

- **Processor (CPU)** : Intel core i5
- **Memory** : 4 GB RAM
- **Hard Disk**: 3 GB of available hard-disk space for installation, additional free space is required during installation.

3.2 Software Requirements

Set up the following software on personal computer for system development.

- **Java 1.6 +:** JDK is an acronym for Java Development Kit. The Java Development Kit(JDK) is a software development environment which is used to develop java applications and applets. It physically exists. It contains JRE + development tools. JDK is an implementation of any one of the below given Java Platforms released by Oracle corporation: Standard Edition Java Platform, Enterprise Edition Java Platform, Micro Edition Java Platform. The JDK contains a private Java Virtual Machine (JVM) and a few other resources such as an interpreter/loader (Java), a compiler (javac), an archiver (jar), a documentation generator (Javadoc) etc. to complete the development of a Java Application.
- **Tomcat Server 7.0 or above:** Tomcat is an application server designed to execute Java servlets and render web pages that use **Java** Server page coding. Accessible as either a

binary or a source code version, Tomcat's been used to power a wide range of applications and websites across the Internet. As a Java Servlet container that provides extended functionality to interact with Java Servlets, Tomcat is a powerful option to execute Java servlets and render web pages that use Java Server page coding. Tomcat enables a pure Java web server environment, bringing together Java-based technologies to run applications built on Java programming language. While its flexibility and interoperability enable Apache Tomcat to behave as a web application server under certain conditions, its true identity is primarily as a Java servlet container.

- **MariaDB 10.0 or above:** MariaDB is the chosen relational database management system (RDBMS) for storing and managing data. It should be set up with an appropriate schema for the project.
- **Eclipse IDE:** Eclipse is an integrated development environment (IDE) used in computer Programming. It contains a base workspace and an extensible plug-in system for customizing the environment. Eclipse is written mostly in Java and its primary use is for developing Java applications, but it may also be used to develop applications in other programming languages via plug-ins, including Ada, ABAP, C, C++, C#, Clojure, COBOL, D, Erlang, Fortran, Groovy, Haskell, JavaScript, Julia, Lasso, Lua, NATURAL, Perl, PHP, Prolog, Python, R, Ruby (including Ruby on Rails framework), Rust, Scala, and Scheme. It can also be used to develop documents with LaTeX (via a TeXlipse plug-in) and packages for the software Mathematica. Development environments include the Eclipse Java development tools (JDT) for Java and Scala, Eclipse CDT for C/C++, and Eclipse PDT for PHP, among others.

This system will be accessible via the any web browser such as Mozilla Firefox, Chrome, Mozilla Edge, etc.

- **JBCrypt Library:** To enhance security, our project utilizes the JBCrypt library for secure password hashing. This library ensures that user passwords are stored in a highly encrypted format, enhancing data protection. We recommend using JBCrypt (version 0.3 or higher) to maintain the confidentiality of user credentials.
- **JSON-Java Library:** To enhance our JSON data handling capabilities, we utilize the JSON-Java library, also referred to as JSON-Simple. This library streamlines the management of JSON data in our application. To ensure smooth handling of JSON objects and arrays, we recommend using JSON-Java version 1.1.1 or a newer version, tailored for compatibility with Apache Tomcat 7.0.
- **Web Browsers:** The system should be accessible and compatible with popular web browsers such as Mozilla Firefox, Google Chrome, Microsoft Edge, etc., to ensure a wide user reach.

3.3 Database Design

“Amono Online Shop” has seven tables such as roles, users, businesses, categories, products, order_items and contacts. The roles table contains id, name and value. The users table contains id, name, email, password, gender, profile, role_id, suspended, created_date and updated_date. The businesses table consists of id, user_id, business_name, description, logo, created_date and updated_date. The categories table contains id, name, created_date and updated_date. The products table consists of id, business_id, category_id, name, description, price, photo, count, status, created_date and updated_date. The order_items table contains id, user_id, product_id, quantity, total_price, status, order_code, name, phone, address, created_date and updated_date. The contact table consists of id, user_id, message, status, created_date and updated_date.

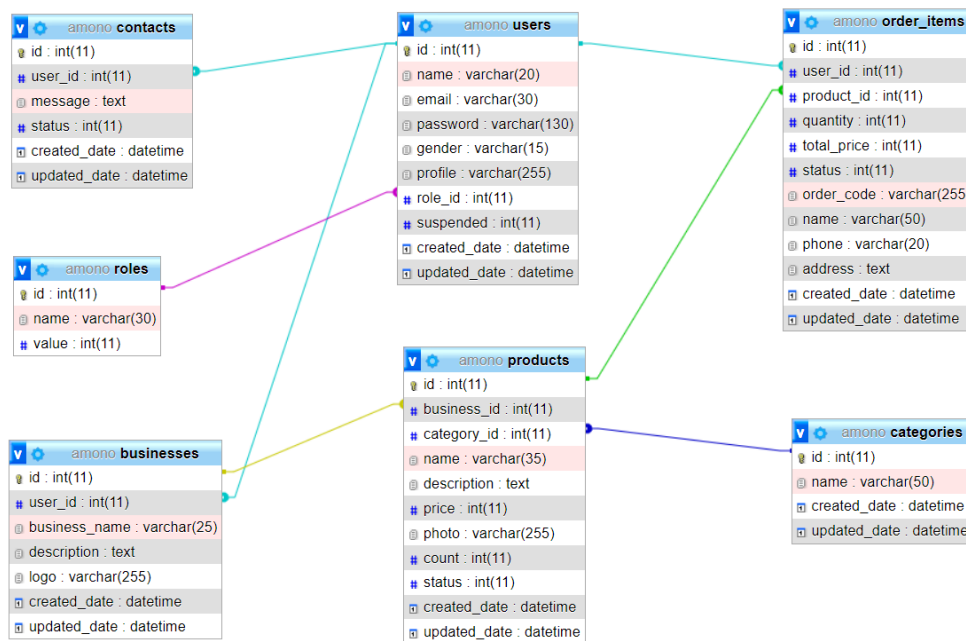

Figure (3.1): Entity Relationship Diagram for Amono Online Shop

Chapter (4)

Project Implementation

4.1 System Home for Administrator

- When the administrator enters the website address, the system shows “Home Page” as illustrated in Figure (4.1).

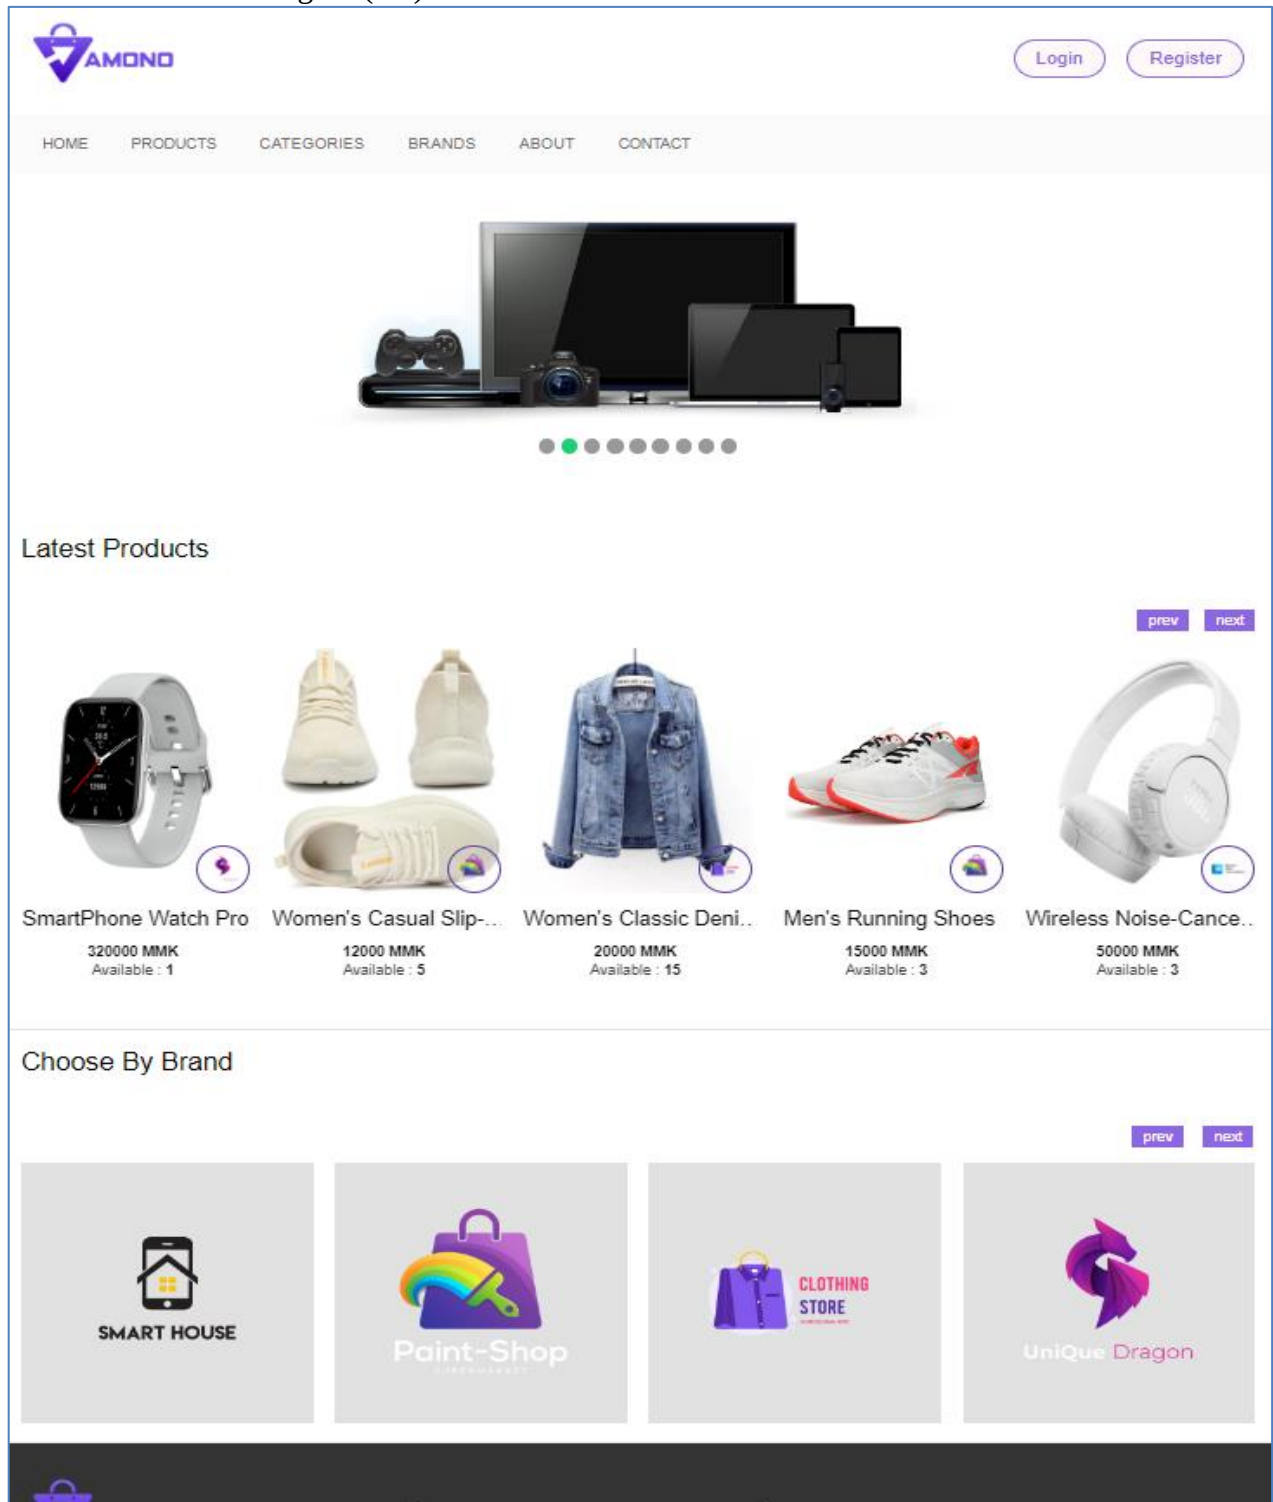

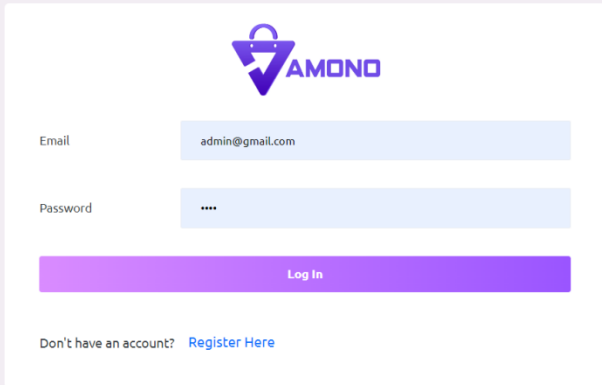

Figure (4.1): System Home Page for Administrator

4.1.1 Login Page for Administrator

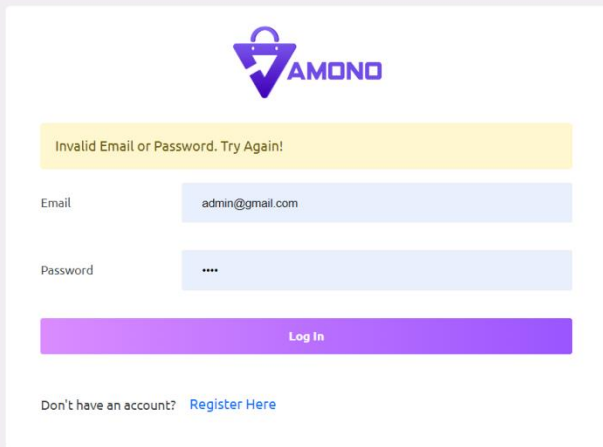

- The administrator login to the system, by clicking “Login” tab at the top menu in Figure (4.1).
- The system displays the login page in Figure (4.2) and the administrator inserts the email and password.

The screenshot shows the AMONO login page. At the top center is the AMONO logo, which consists of a purple shield with a white checkmark and the word "AMONO" in purple. Below the logo are two input fields: "Email" with the value "admin@gmail.com" and "Password" with four asterisks. A purple "Log In" button is positioned below the password field. At the bottom left, there is a link "Don't have an account? Register Here". In the bottom right corner, there is a small text "Activate Windows Go to Settings to activate Windows."

Figure (4.2): Login Page for Administrator

- The administrator type invalid email or password, the system shows the error message as shown in Figure (4.3).

The screenshot shows the AMONO login page with an error message. A yellow banner at the top of the form area displays the text "Invalid Email or Password. Try Again!". Below this banner are the same "Email" and "Password" input fields as in Figure 4.2, with "admin@gmail.com" and four asterisks respectively. The purple "Log In" button and the "Don't have an account? Register Here" link are also present. The "Activate Windows" watermark is visible in the bottom right corner.

Figure (4.3): Login Error Page for Administrator

4.1.2 Administrator Dashboard Page

- When the administrator login is successful, the system displays “Dashboard” page to the administrator as illustrated in Figure (4.4).

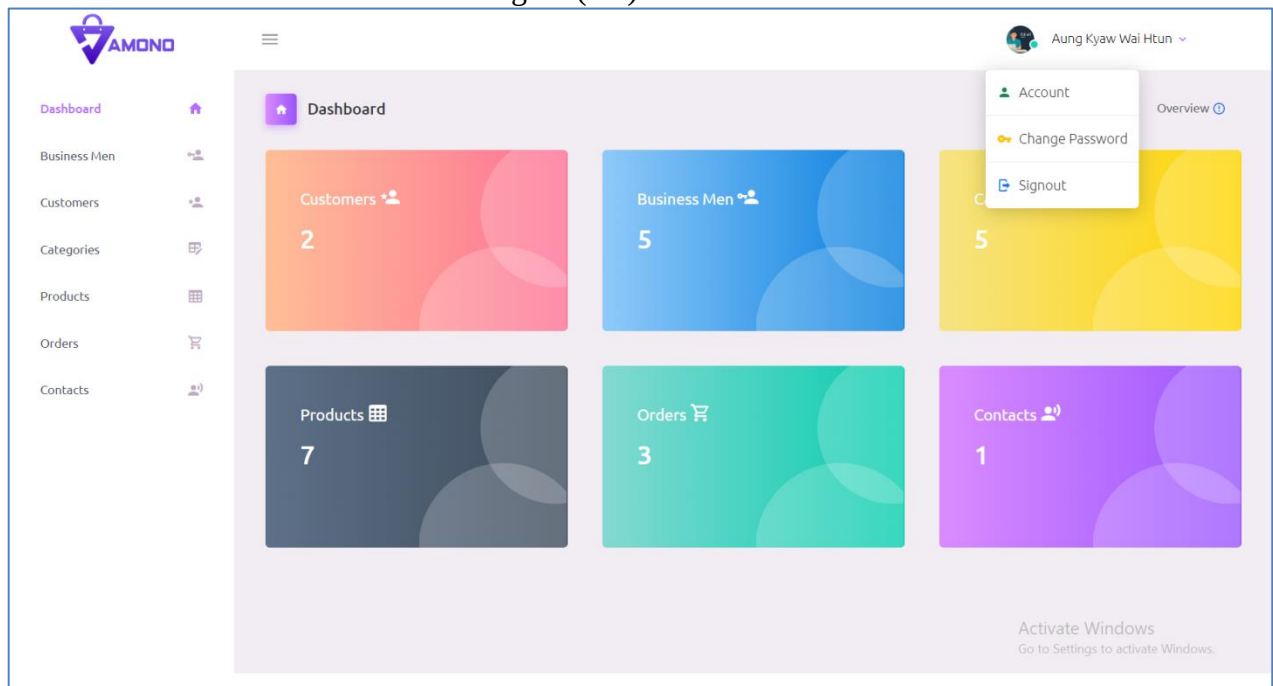

Figure (4.4): Administrator Dashboard Page

4.2 Business Men List for Administrator

- When the administrator wants to view the business owners of the system, the admin clicks “Business Men” tab and the system shows the business men list as described in Figure (4.5).

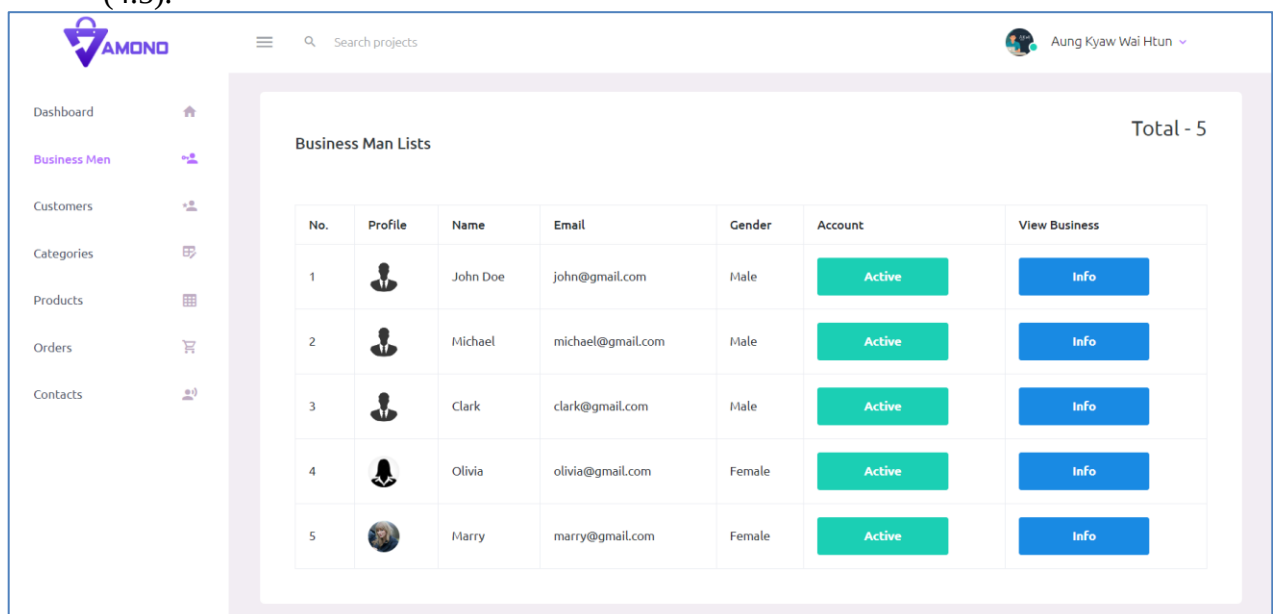

Figure (4.5): Business Man lists

4.2.1 Business information of each Business Man

- When the administrator wants to view the business information of the each business man, the admin clicks “Info” button and the system shows the business information as described in Figure (4.6).

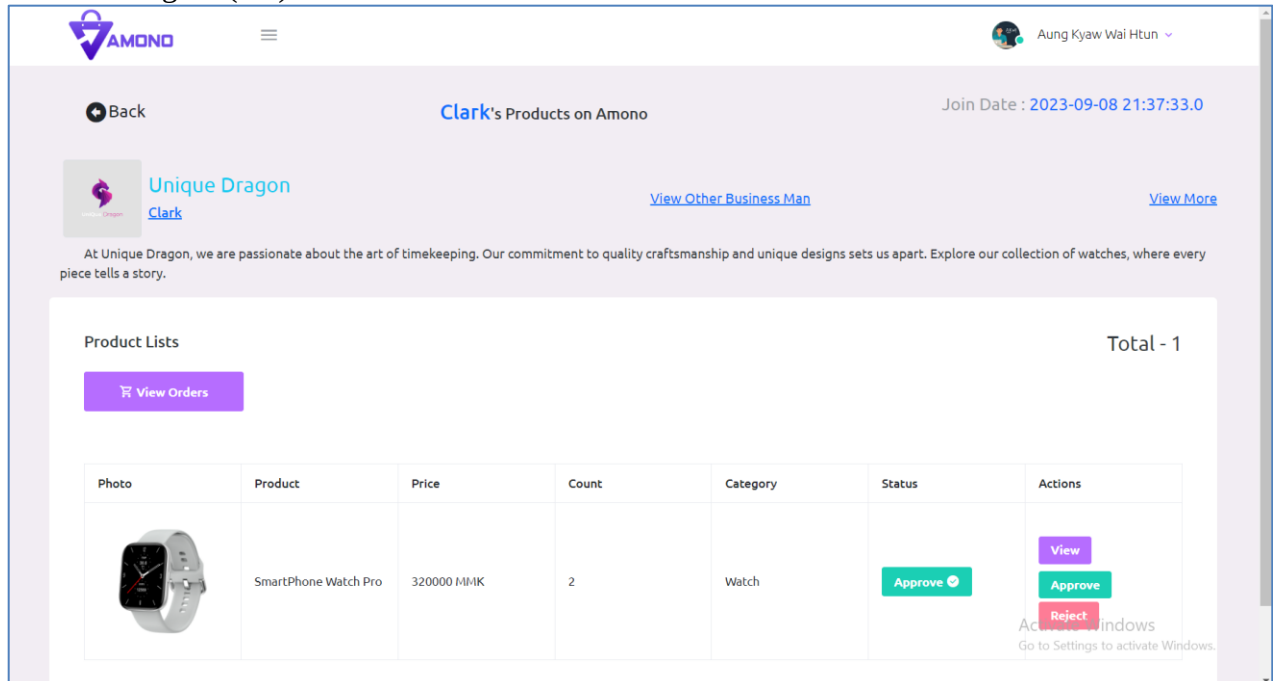

Figure (4.6): Business Information

4.2.2 Business Information Detail

- When the administrator wants to view the more business information of the each business man, the admin clicks “View More” tab and the system shows the business information details as described in Figure (4.7).

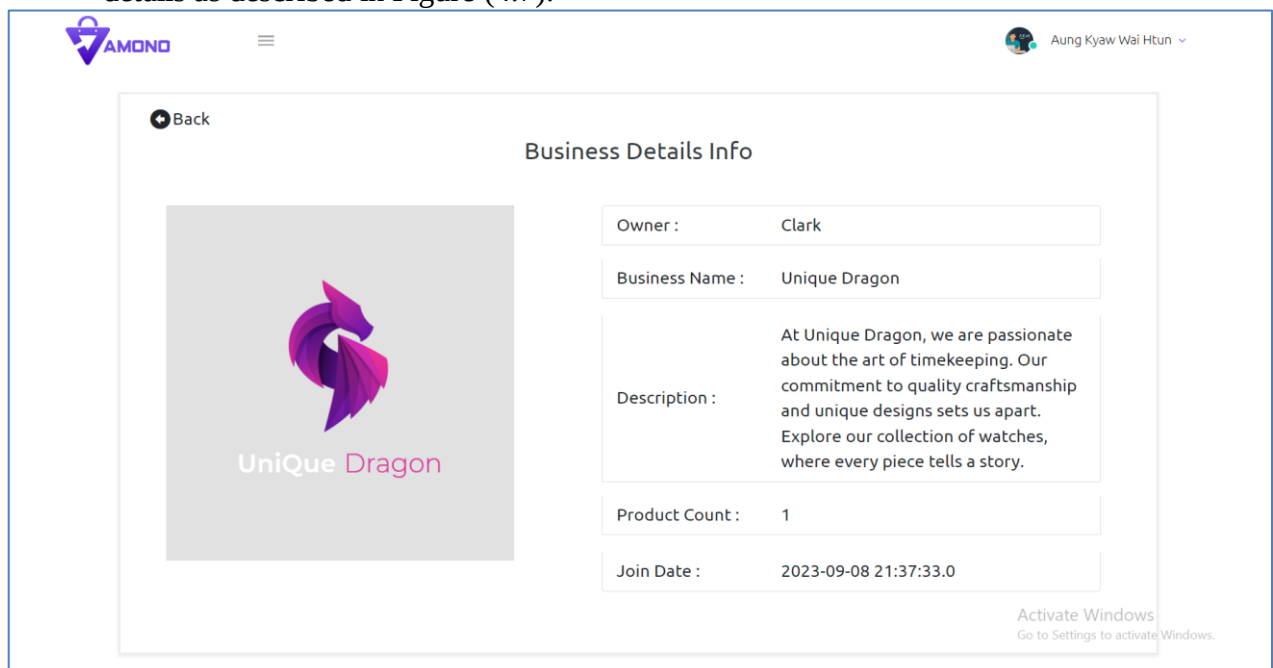

Figure (4.7): Business Information Details

4.2.3 View Product Detail of Business Man

- When the administrator wants to view the complete product details of the each business man, the admin clicks “View” tab of each product and the system shows the product information details as described in Figure (4.8).

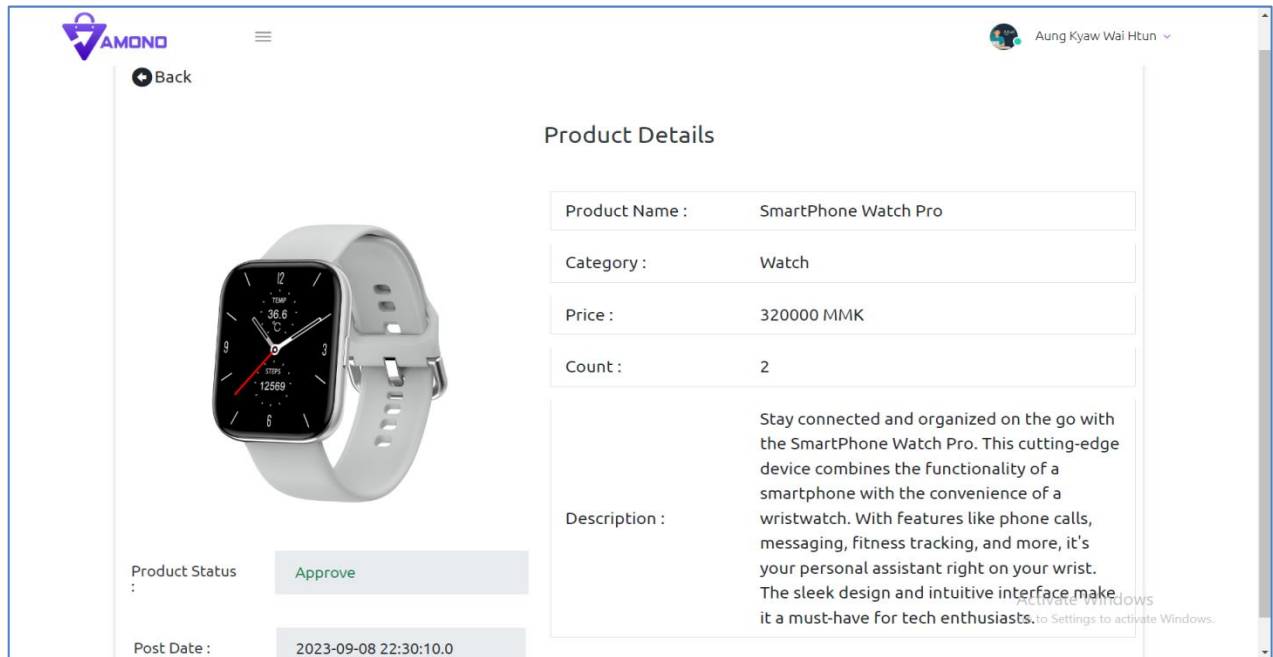

Figure (4.8): Product Details

4.2.4 View Product Detail of Business Man

- When the administrator wants to approve the business man's product, the admin clicks “Approve” tab of product and the system shows the product status as described in Figure (4.9).
- When the administrator wants to reject the business man's product, the admin clicks “Reject” tab of product and the system shows the product status as described in Figure (4.9).

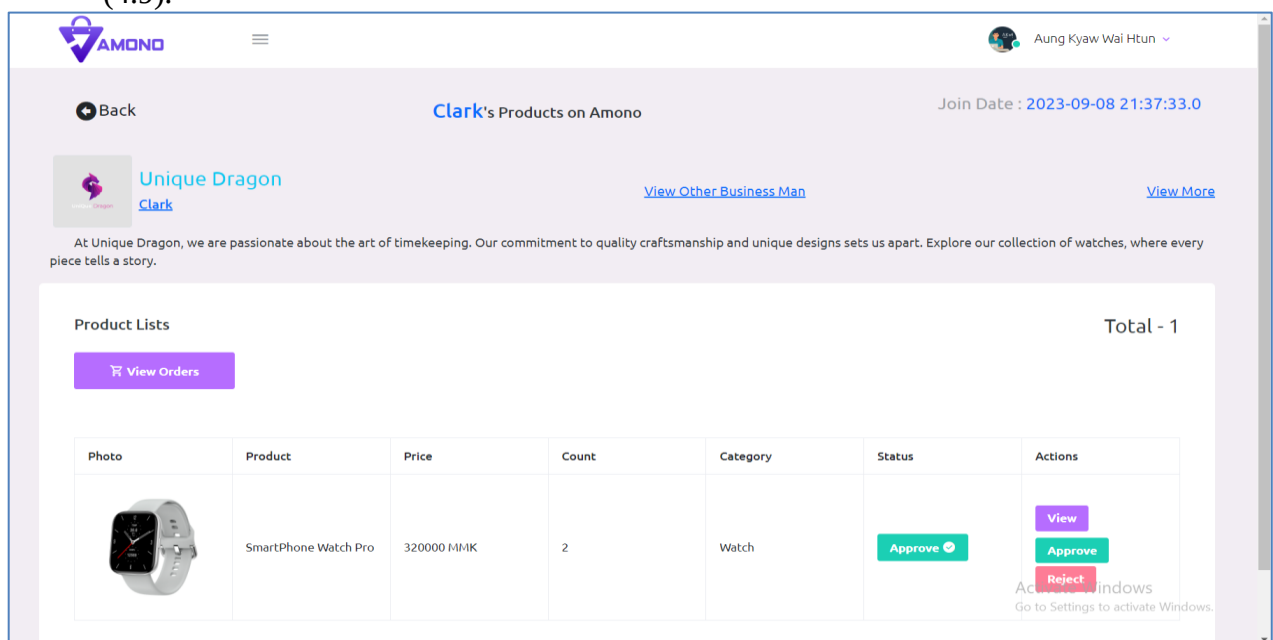

Figure (4.9): Approve Product Upload of Business Man

4.2.5 View Product Orders of Business Man

- When the administrator wants to view the orders business man's product, the administrator clicks "View Orders" tab and the system shows the orders list as described in Figure (4.10).

Customer	Owner	Product	Total Price	Order Code	Order Date	Status	Action
Kyew Kyaw 09-923445335 3rd floor, Myanmar Plazzar, Kabar Aye Pagoda Rd, Yangon		 SmartPhone Watch Pro 320000MMK 1	320000 MMK	amono3983432	2023-09-09 15:15:10	Pending...	###

Figure (4.10): Orders List of Business Man

4.2.6 Business Men's Account Management

- When the administrator wants to suspend the business man's account, the administrator clicks "Active" tab, the administrator want to active the business man's account, the administrator clicks "Suspended" tab as described in Figure (4.11).

No.	Profile	Name	Email	Gender	Account	View Business
1		John Doe	john@gmail.com	Male	Active	Info
2		Michael	michael@gmail.com	Male	Suspended	Info
3		Clark	clark@gmail.com	Male	Active	Info
4		Olivia	olivia@gmail.com	Female	Active	Info
5		Marry	marry@gmail.com	Female	Active	Info

Figure (4.11): Business Men's Account Management

4.2.6 Customer's Account Management

- When the administrator wants to view the customers of the system, the administrator clicks “Customers” tab and the system shows the customers lists and the administrator can suspend or active the customer's account like business owners' account as described in Figure (4.12).

No.	Profile	Name	Email	Gender	Account
1		Austin	austin@gmail.com	Male	Active
2		Aung Pann Wai	aung@gmail.com	Male	Suspended

Figure (4.12): Customer's Account Management

4.3 Manage Categories

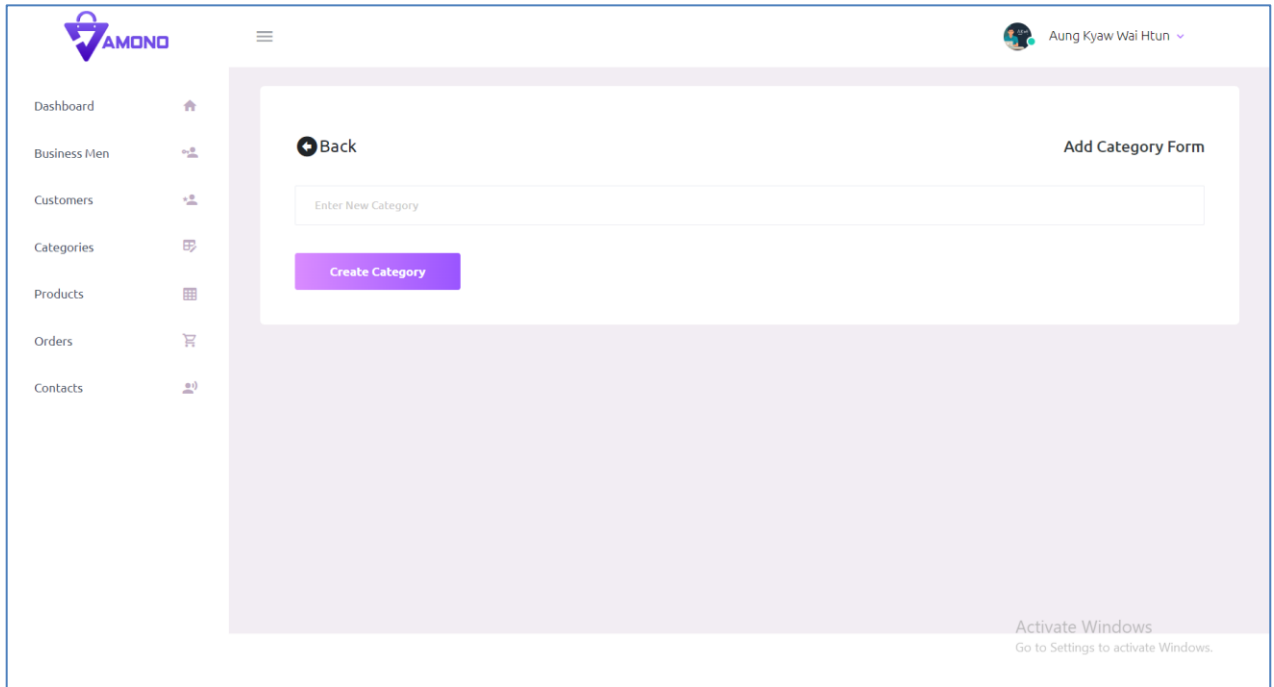

- When the administrator wants to view the categories of the system, the admin clicks “Categories” tab and the system shows the category lists as described in Figure (4.13).

No.	Name	Created Date	Action
1	Watch	2023-09-08 21:15:09.0	Edit Delete View Products
2	Electronic Device	2023-09-08 21:15:18.0	Edit Delete View Products
3	Cloth	2023-09-08 21:15:22.0	Edit Delete View Products
4	Shoe	2023-09-08 21:15:34.0	Edit Delete View Products

Figure (4.13): Category Lists

4.3.1 Add Category

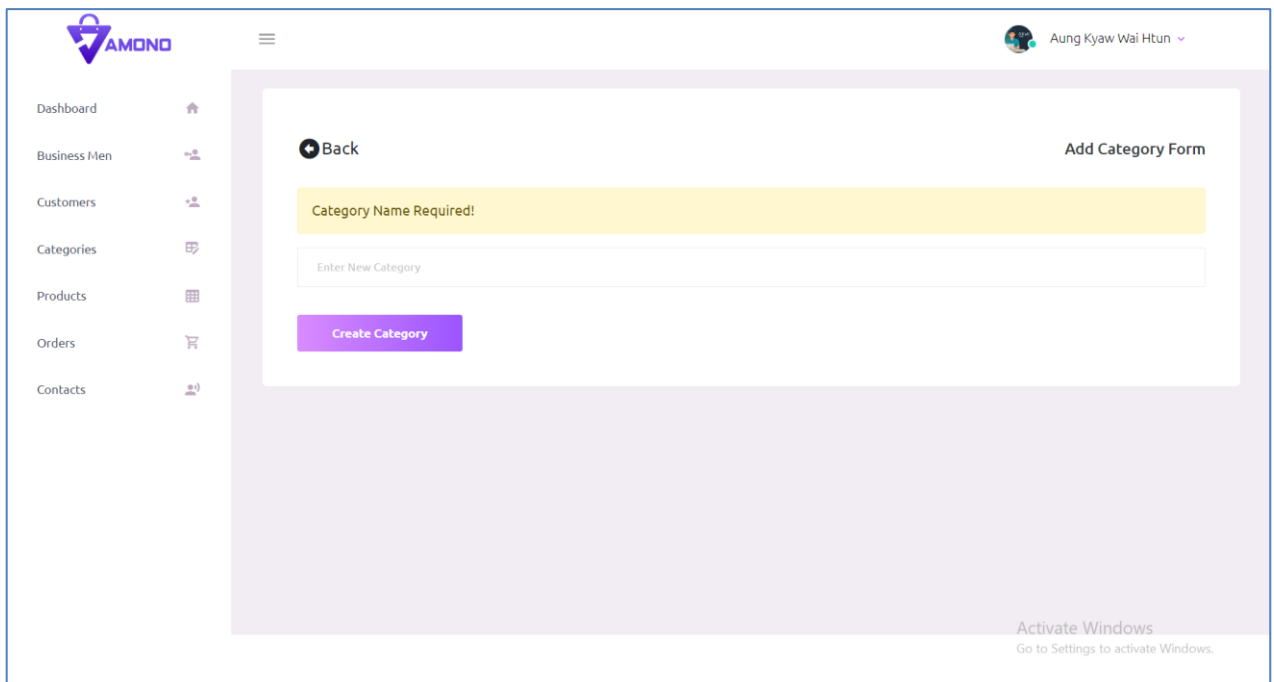

- When the administrator wants to add category, the administrator clicks “Add Category” tab, and the system shows add category form as described in Figure (4.14).

The screenshot shows the AMONO web application interface. On the left is a sidebar menu with options: Dashboard, Business Men, Customers, Categories, Products, Orders, and Contacts. The main content area is titled "Add Category Form" and contains a "Back" button with a left arrow, a text input field labeled "Enter New Category", and a purple "Create Category" button. At the bottom right of the main area, there is a small "Activate Windows" watermark with the text "Go to Settings to activate Windows."

Figure (4.14): Add Category Form

- When the administrator didn't fill the required field for new category into “Add Category Form” the system will show the “field is required” error message as shown in Figure (4.15).

This screenshot shows the same "Add Category Form" as Figure 4.14, but with an error message. A yellow banner at the top of the form area displays the text "Category Name Required!". Below this banner is the "Enter New Category" input field and the "Create Category" button. The sidebar and "Activate Windows" watermark are also present.

Figure (4.15): Field required error message for Administrator

- After adding the new category name, the admin clicks “Create Category” button at Figure (4.15) and the system displays the new category at Category lists as illustrated in Figure (4.16).

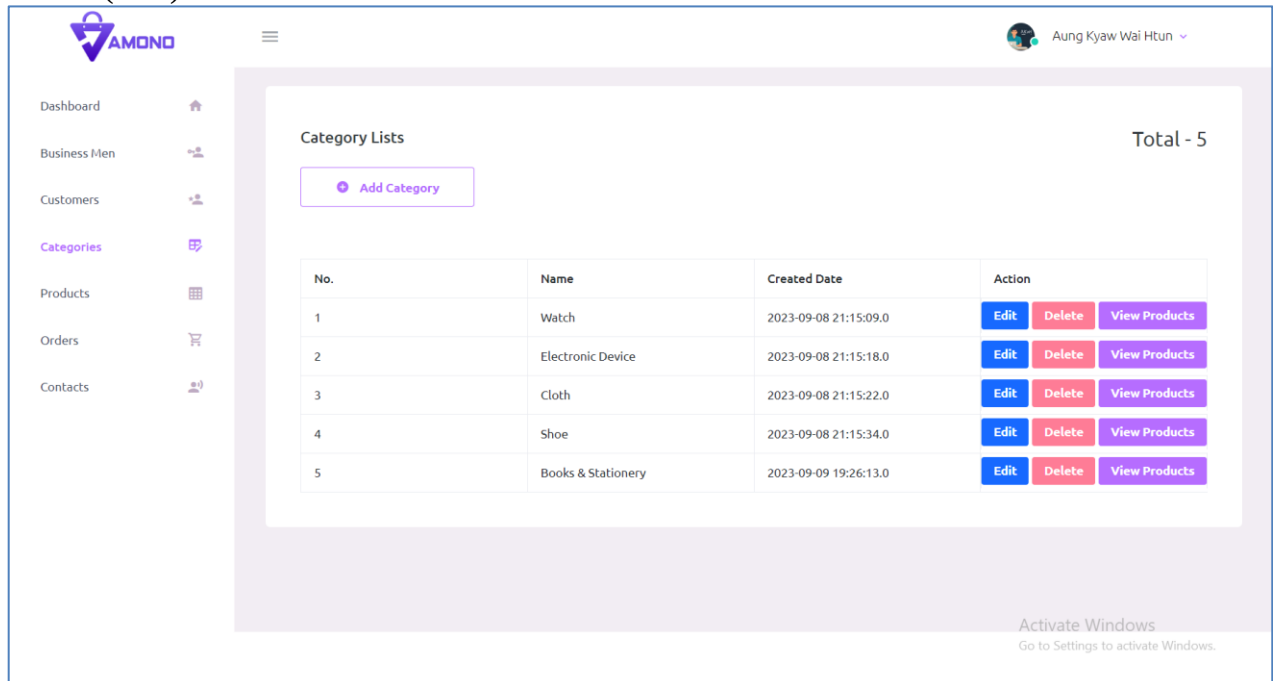

Figure (4.16): Created New Category for Administrator

4.3.2 Update Category

- When the administrator wants to edit the category, the admin clicks “Edit” button in Figure (4.16).
- After clicking “Edit” Button in Figure (4.16), the admin can update the category, in the “Update Category Form” as shown in Figure (4.17).

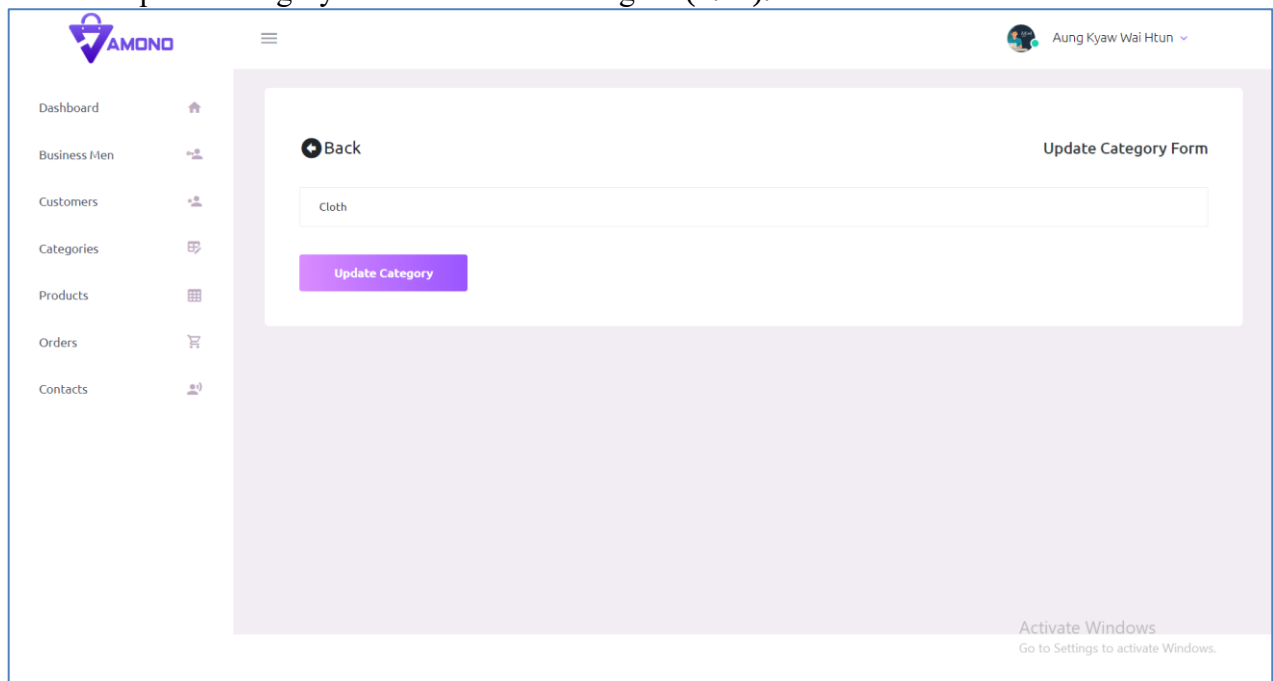

Figure (4.17): Update Category for Administrator

- When the administrator didn't fill the required field for update category into "Update Category Form" the system will show the "field is required" error message as shown in Figure (4.18).

The screenshot shows the 'Update Category Form' in the AMONO system. A yellow error banner at the top states 'Update Category Name Required!'. Below it, a text input field contains the word 'Clothing'. A purple 'Update Category' button is positioned below the input field. The left sidebar lists navigation options: Dashboard, Business Men, Customers, Categories, Products, Orders, and Contacts. The top right shows the user 'Aung Kyaw Wai Htun'.

Figure (4.18): Field required error message for Administrator

- After Updating the category, the system shows success message as described in Figure (4.19).

The screenshot shows the 'Category Lists' page. A green success banner at the top states 'Category Updated Successfully!'. Below it is a table with 5 categories. The table has columns for No., Name, Created Date, and Action. The 'Action' column contains 'Edit', 'Delete', and 'View Products' buttons. The total number of categories is 5.

No.	Name	Created Date	Action
1	Watch	2023-09-08 21:15:09.0	Edit Delete View Products
2	Electronic Device	2023-09-08 21:15:18.0	Edit Delete View Products

4	Shoe	2023-09-08 21:15:34.0	Edit Delete View Products
5	Books & Stationery	2023-09-09 19:26:13.0	Edit Delete View Products

Figure (4.19): Successful updated message for Category

4.3.3 Delete Category

- When the administrator wants to delete the category, the admin clicks “Delete” in Figure (4.19) button.
- After clicking the “Delete” button in Figure (4.19), the system displays the delete confirm dialog box.
- When the admin really wants to delete this category, the admin clicks “OK” button as illustrated in Figure (4.20).

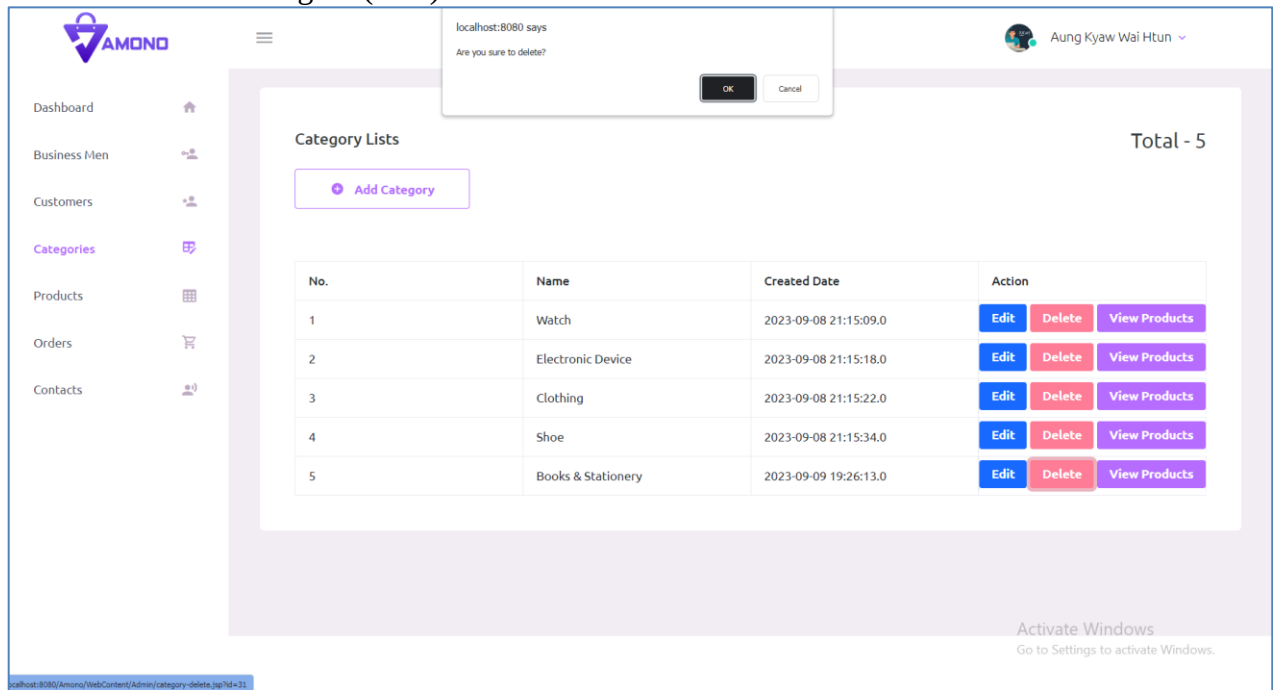

Figure (4.20): Alert message for Administrator

- After deleting the category, the system shows delete successful message as illustrated in Figure (4.21).

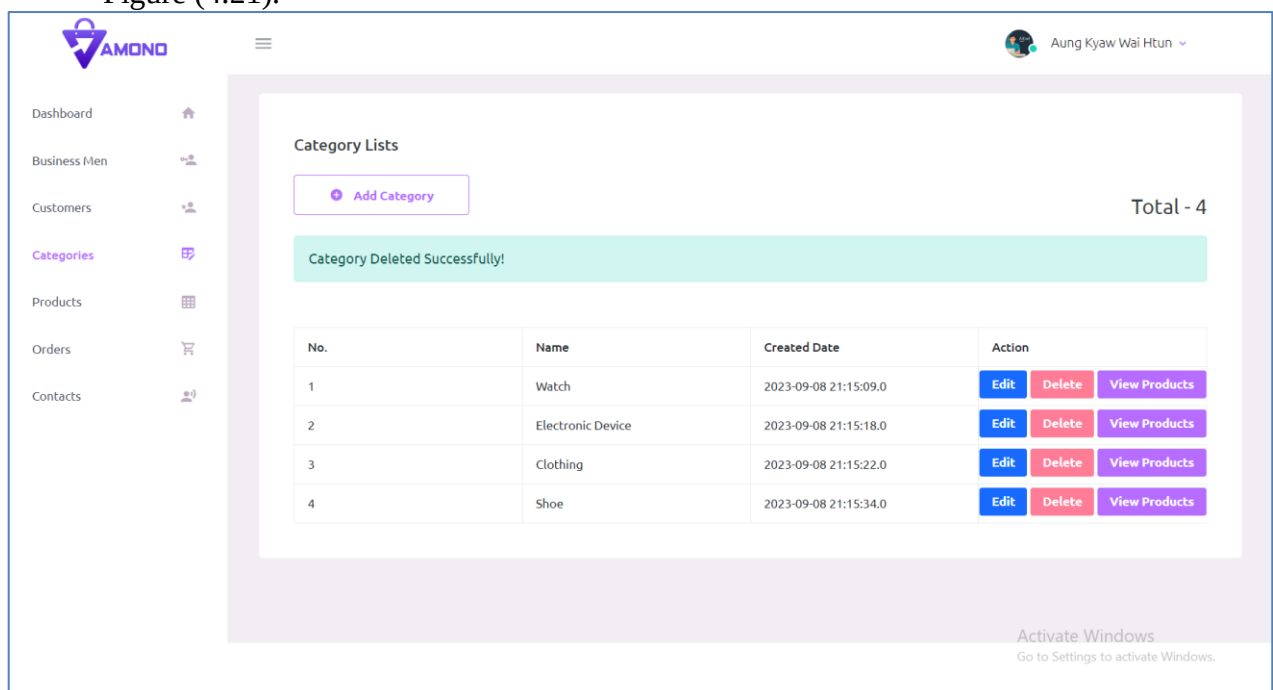

Figure (4.21): Category deleted successful message

4.3.3 View Category Related Products

- When the administrator wants to all products related to each category, the admin clicks “View Products” button in Figure (4.21).
- After clicking the “View Products” button in Figure (4.21), the system displays the filter products of category as illustrated in Figure (4.22).

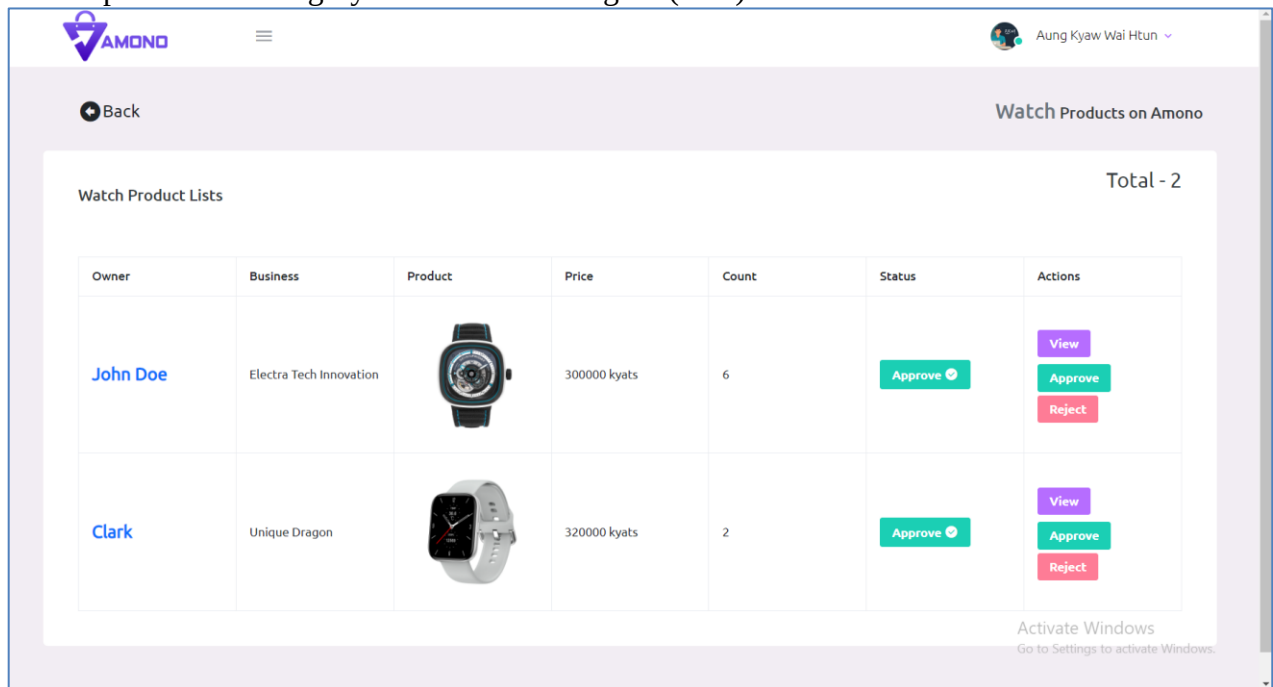

Figure (4.22): Filter Product Lists of Category

- When the administrator wants to know which business is own this product, the admin click Owner name in Figure (4.22) and the system displays all products and details of business as illustrated in Figure (4.23).

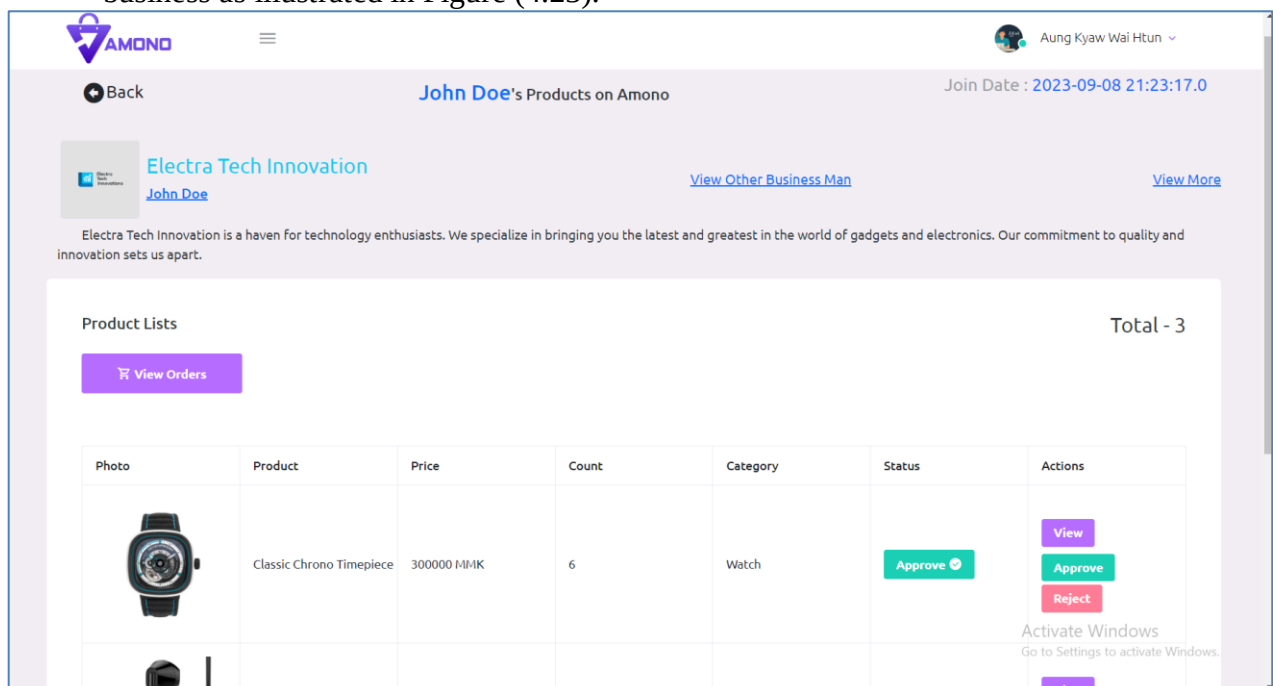

Figure (4.23): Business Details and Product Lists

- After getting the business details and product lists in Figure (4.23), the admin can also do view product details, approve product and reject product.

4.4 Manage Products

- When the administrator wants to all products of all business, the admin clicks “Products” tab of left side bar and the system shows the product lists of all business as described in Figure (4.24).

Owner	Business	Product	Price	Count	Status	Actions
Marry	Paint Shop		15000 MMK	4	Approve	View Approve Reject
Marry	Paint Shop		12000 MMK	5	Approve	View Approve Reject
Clark	Unique Dragon		320000 MMK	2	Approve	View Approve

Figure (4.24): All Product Lists of all Business

- After clicking “Products” tab of left side bar, the admin can also do view product details, approve product, reject product and check which business is own this product as before.

4.5 View Orders for Administrator

- When the administrator wants to know which customer ordered the products of which business, the admin clicks “Orders” tab and the system shows the all order lists of all business as described in Figure (4.25).

- When the administrator wants to view which the feedback of customers and business men, the admin clicks “Contacts” tab and the system shows the all contact lists as described in Figure (4.28).

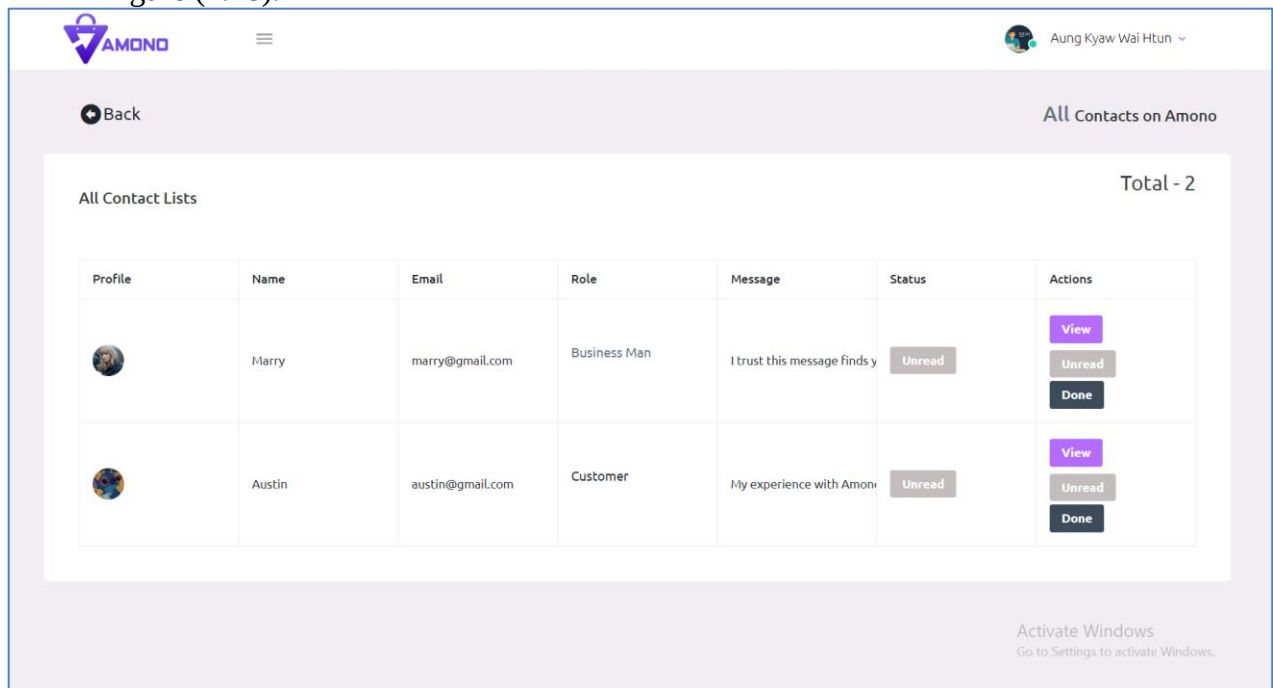

Figure (4.28): All Contact Lists

4.6.1 View Contact Message

- When the administrator wants to view the contact message, the admin clicks “View” button in Figure (4.28) and the system shows the message as described in Figure (4.29).

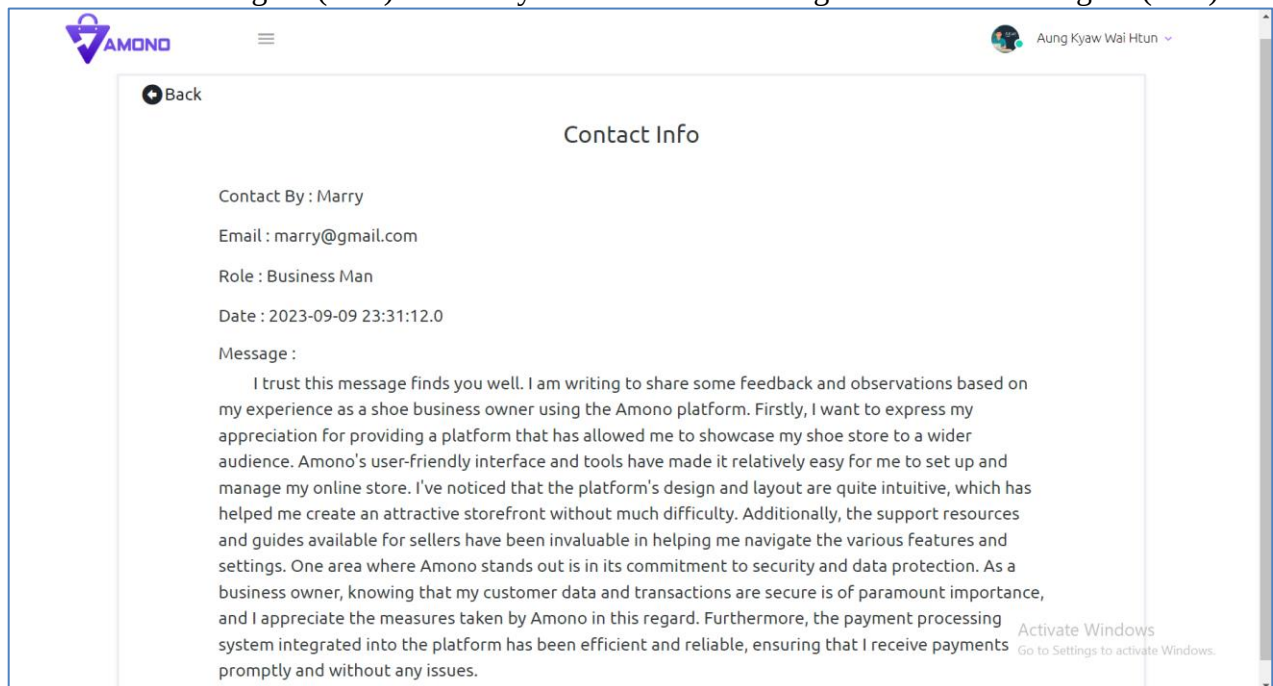

Figure (4.29): View Contact Message

4.6.2 Mark and Unmark Contact

- When the administrator wants to mark the contact message to know that is read or wants to unmark that contact is not read, the admin clicks “Done” or “Unread” button in Figure (4.28) as described in Figure (4.30).

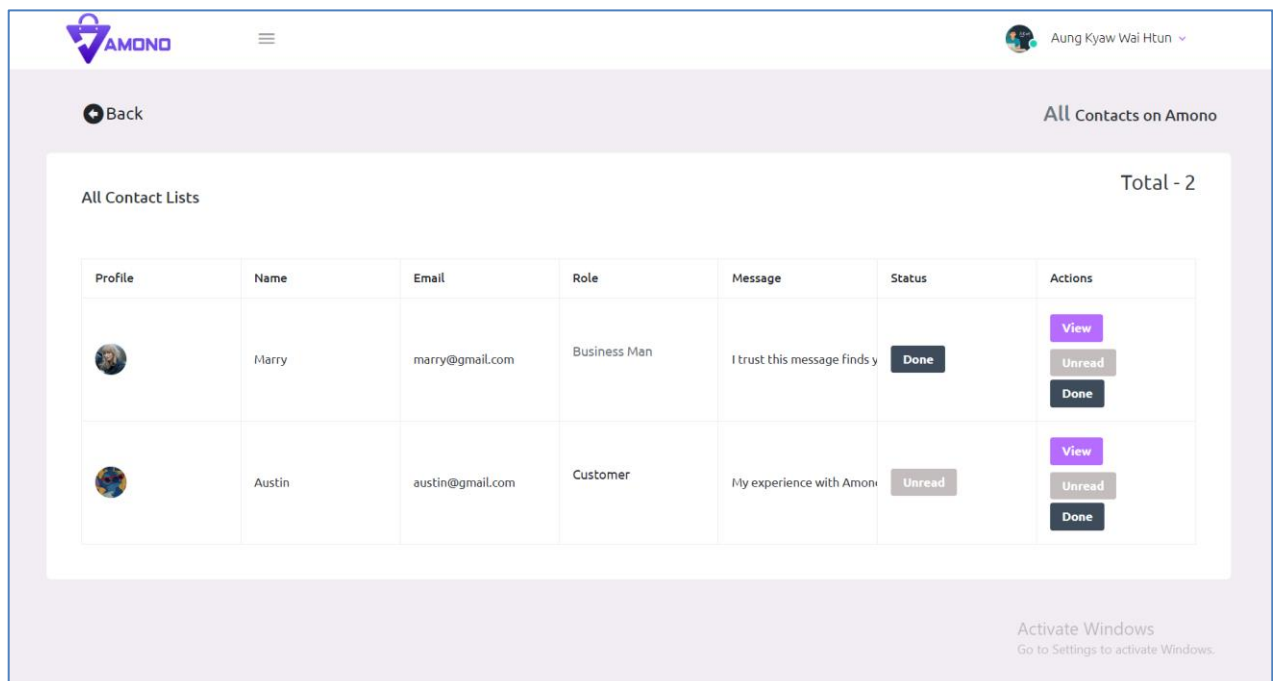

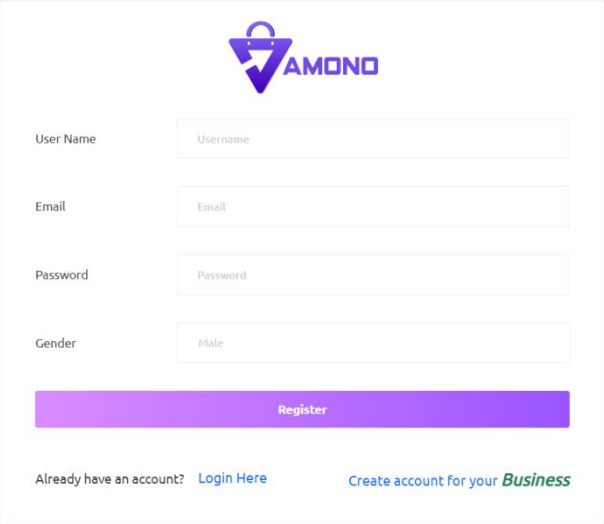

Figure (4.30): Mark or Unmark Contact Message

4.7 Account Registration for Business Owner

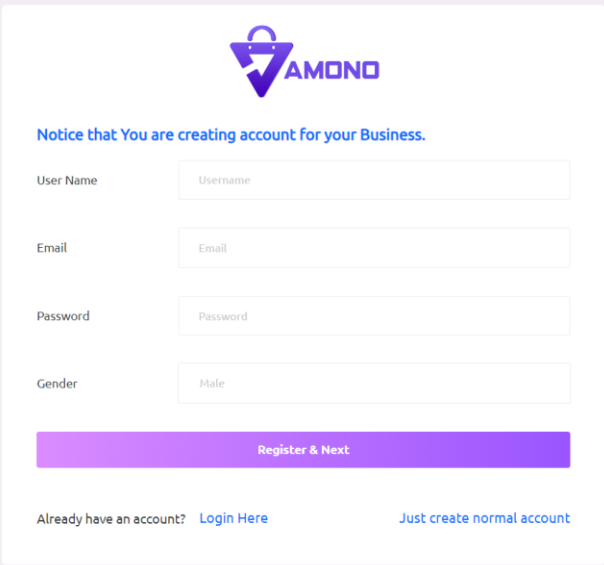

- If the user wants to be the business owner of the system, the user clicks “Register” tab in system home page and then click “Create Account for your Business” tab as described in Figure (4.31).

The screenshot shows a registration form for AMONO. At the top is the AMONO logo, which consists of a purple shield with a white 'A' and the word 'AMONO' in purple. Below the logo are four input fields: 'User Name' with a placeholder 'Username', 'Email' with a placeholder 'Email', 'Password' with a placeholder 'Password', and 'Gender' with a placeholder 'Male'. Below these fields is a large purple button labeled 'Register'. At the bottom of the form, there is a link 'Already have an account? Login Here' and a link 'Create account for your Business' in green. In the bottom right corner of the page, there is a watermark that says 'Activate Windows Go to Settings to activate Windows.'

Figure (4.31): Account Registration Form

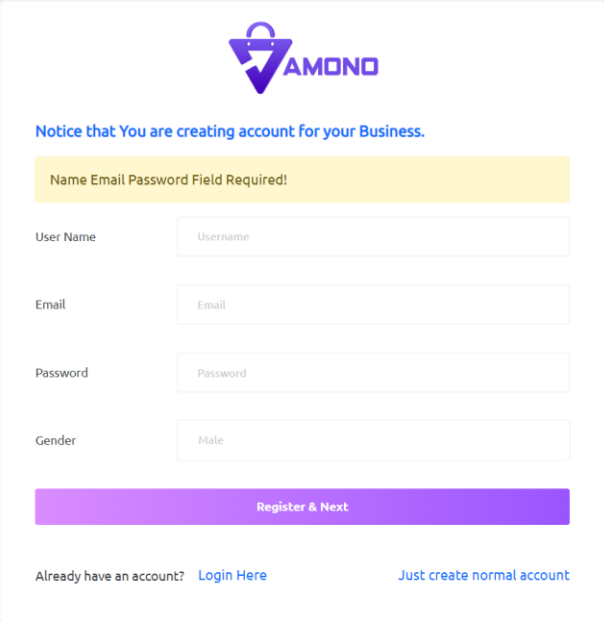

- After clicking “Create account for your Business” tab in Figure (4.31), the system shows “Register Form” for business owner in Figure (4.32) and registers with name, email, password and gender.

The screenshot shows a registration form for AMONO, specifically for business owners. At the top is the AMONO logo. Below the logo is a blue notice that says 'Notice that You are creating account for your Business.' Below the notice are four input fields: 'User Name' with a placeholder 'Username', 'Email' with a placeholder 'Email', 'Password' with a placeholder 'Password', and 'Gender' with a placeholder 'Male'. Below these fields is a large purple button labeled 'Register & Next'. At the bottom of the form, there is a link 'Already have an account? Login Here' and a link 'Just create normal account' in blue. In the bottom right corner of the page, there is a watermark that says 'Activate Windows Go to Settings to activate Windows.'

Figure (4.32): Business Account Registration Form

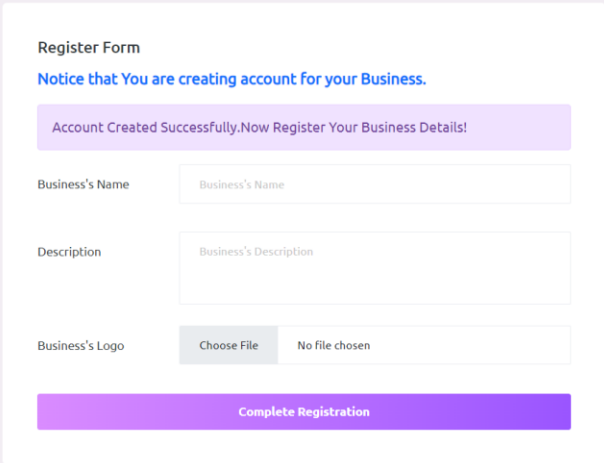

- When the business owner didn't fill the required field for account registration, the system will show the "field is required" error message as shown in Figure (4.32).

The screenshot shows the AMONO logo at the top. Below it, a blue notice reads: "Notice that You are creating account for your Business." A yellow error banner states: "Name Email Password Field Required!". The form contains four input fields: "User Name" (placeholder: Username), "Email" (placeholder: Email), "Password" (placeholder: Password), and "Gender" (placeholder: Male). A purple "Register & Next" button is at the bottom. Below the button, there are links: "Already have an account? [Login Here](#)" and "[Just create normal account](#)". In the bottom right corner, there is a watermark: "Activate Windows Go to Settings to activate Windows."

Figure (4.33): Required Filed message for Business Account Registration

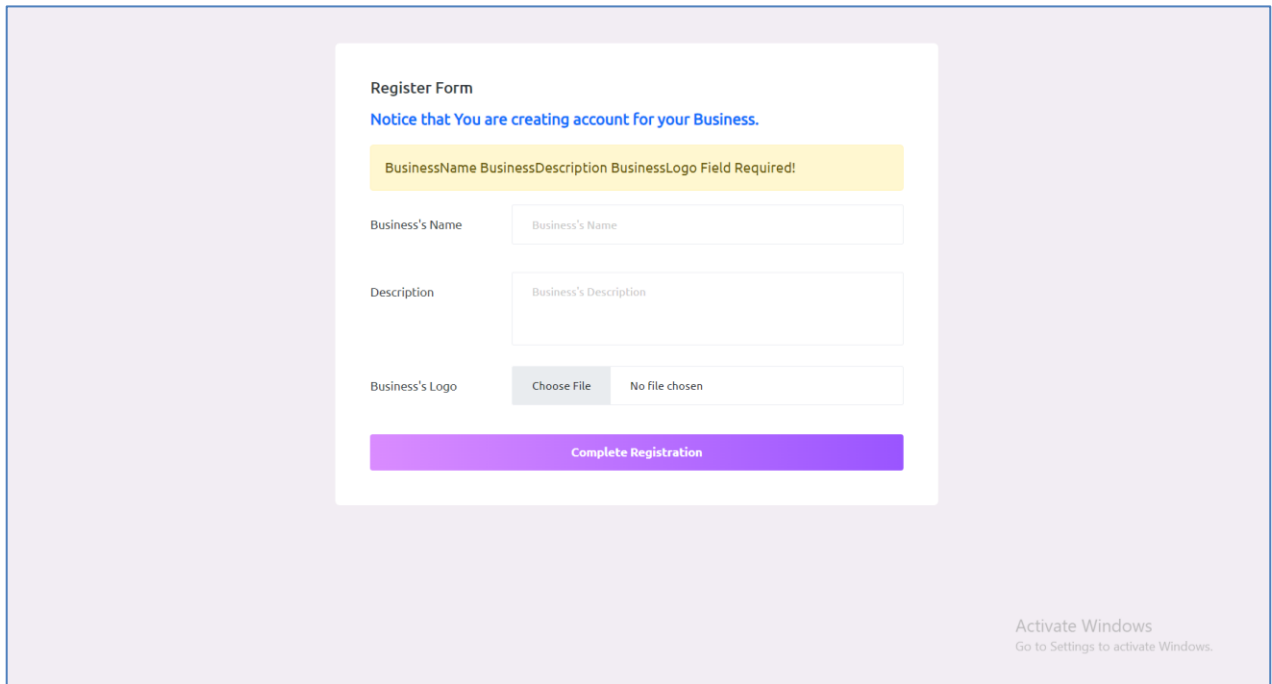

- When the business owner been registered by clicking "Register & Next" tab in Figure (4.33), the business owner must register for own business in second "Registration Form" as shown in Figure (4.34) and registers business name, business description and upload business logo.

The screenshot shows the "Register Form" with the AMONO logo. A blue notice reads: "Notice that You are creating account for your Business." A purple banner states: "Account Created Successfully.Now Register Your Business Details!". The form contains three input fields: "Business's Name" (placeholder: Business's Name), "Description" (placeholder: Business's Description), and "Business's Logo" (placeholder: Choose File, No file chosen). A purple "Complete Registration" button is at the bottom. In the bottom right corner, there is a watermark: "Activate Windows Go to Settings to activate Windows."

Figure (4.34): Business Account Registration Form

- When the business owner didn't fill the required filed for account registration, the system will show the "field is required" error message as shown in Figure (4.35).

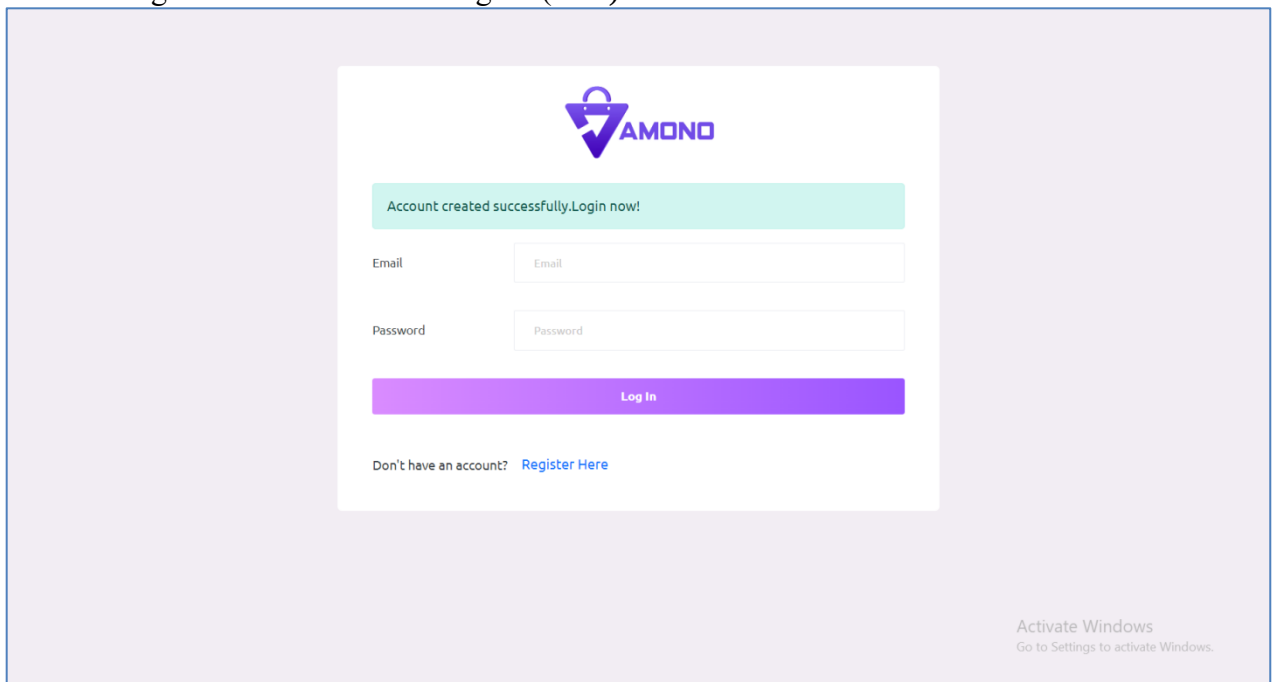

The screenshot shows a 'Register Form' with a blue header. Below the header is a blue notice: 'Notice that You are creating account for your Business.' A yellow error banner at the top of the form states: 'BusinessName BusinessDescription BusinessLogo Field Required!'. The form contains three input fields: 'Business's Name', 'Description', and 'Business's Logo'. The 'Business's Logo' field includes a 'Choose File' button and a 'No file chosen' text. A purple 'Complete Registration' button is at the bottom of the form. In the bottom right corner of the page, there is a watermark that says 'Activate Windows Go to Settings to activate Windows.'

Figure (4.35): Required Filed message for Business Account Registration

4.7.1 Login for Business Owner

- When the business has been registered successfully, the business owner accesses the "Login Form" as shown in Figure (4.36).

The screenshot shows a login form with a purple header featuring the 'AMONO' logo. A green success banner at the top says: 'Account created successfully.Login now!'. Below this are two input fields: 'Email' and 'Password'. A purple 'Log In' button is positioned below the password field. At the bottom, there is a link that says 'Don't have an account? Register Here'. In the bottom right corner of the page, there is a watermark that says 'Activate Windows Go to Settings to activate Windows.'

Figure (4.36): Account Created Successful message

- After registering successfully, the business owner can login by entering the correct email and password in "Login Form" as shown in Figure (4.36) and if email or password is incorrect the system shows error message.

4.7.2 Dashboard for Business Owner

- When the business owner login is successful, the system displays “Dashboard” page of the business owner as illustrated in Figure (4.37).

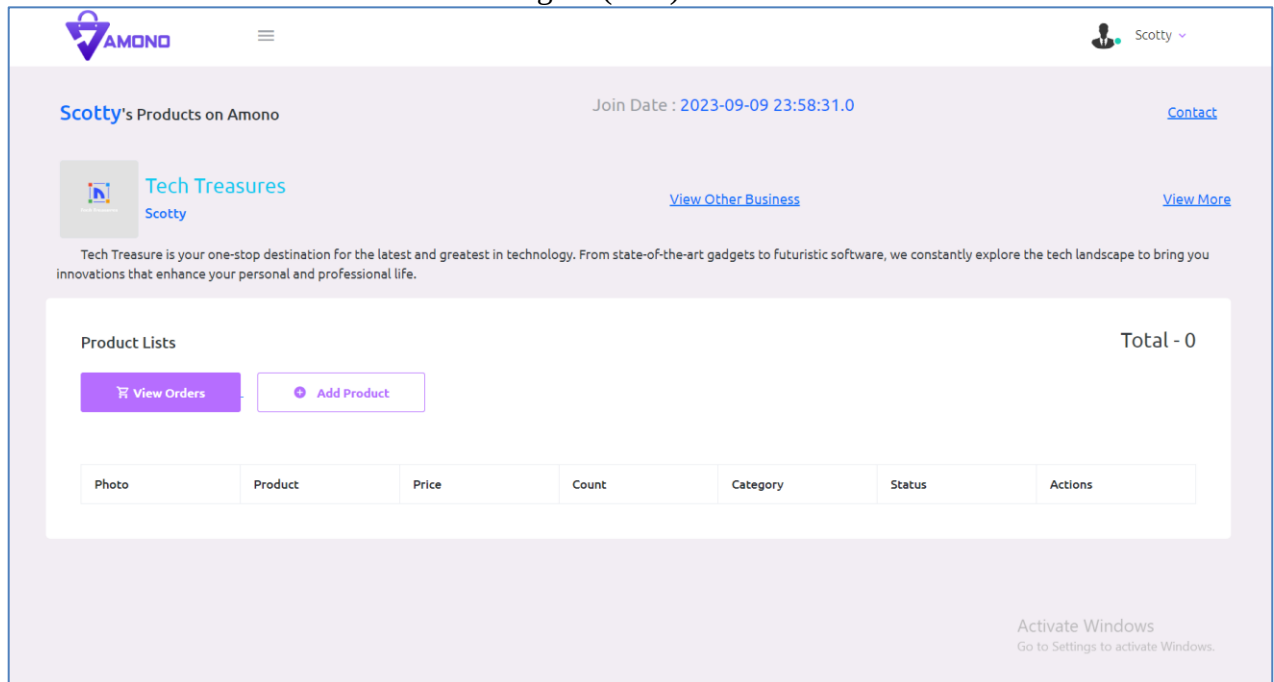

Figure (4.37): Business Owner Dashboard

4.7.3 Add Product for Business Owner

- When the business owner wants to add new product, the business owner clicks “Add Product” button in Figure (4.37) and the system show “Add Product Form” for business owner as shown in Figure (4.38) and Figure (4.39).

- When the user wants to go back to related home page and click “Back to Home” button in Figure (4.96) and Figure (4.97).

Chapter (5)

Conclusion

5.1 Conclusion

In a nutshell, “Amono Online Shop” is all about making life easier. For customers, it's a one-stop shop where you can find what you need without the hassle. For businesses, it's a powerful tool to reach more customers and boost sales. Amono bridges the gap between buyers and sellers, making shopping convenient and local business growth attainable. As we march into the digital era, Amono is leading the way, making online shopping better for everyone.

5.2 Limitations of the Project

The current version isn't fully responsive on all devices. It currently lacks integrated payment processing, and some URLs may need enhanced security. And it is currently limited to running on a local machine so users and businesses owner outside the local network cannot access the platform.

5.3 Further Extensions

In the future, we aim to make Amono Online Shop even better. Here's what's coming: a smarter search bar to help you find products faster, dividing long lists into manageable pages, a safe and easy payment system, extra security for our website, a way for you to share your thoughts and ratings, a mobile app for shopping on the go, support for multiple languages and seamlessly accessed and navigated on any device, whether it's a desktop computer, tablet, or smartphone. We have committed to keeping Amono simple and convenient while adding features you'll love.
